

Amendments to the Specification

Please amend the specification as follows.

Please amend the paragraph beginning at page 9, line 29, as follows:

FIG. 5 is a block diagram showing the configuration of the non-PC printing system according to the present embodiment. The present non-PC printing system is composed of a digital TV 100, which serves as a ~~non-host~~ non-PC host device, and a printer 200.

Please amend the paragraph beginning at page 18, line 14, as follows:

~~Here~~Here, in the case where such image is found (Yes in S5), the processing returns to the process (S3) of determining whether or not the number of pixels in the image is smaller than the predetermined number of pixels. In the case where such image is not found (No in S5), the operation performed by the priority decision unit 203 is terminated. Thus, whether to prioritize a quality of the images at the time of printing or a speed of processing for image data is determined for all the images to be printed, based on the print content description data.
